

Find the compressibility for carbon dioxide at 60 °C and 10 MPa using Diagram:

Solution:

CO₂: $T_c = 304.1 \text{ K}$ $P_c = 7.38 \text{ MPa}$

$T_r = T/T_c = 333/304.1 = 1.095$

$P_r = P/P_c = 10/7.38 = 1.355$

From Diagram: $Z \approx 0.45$
