

# The Daily Gamecock *Opinion*

## Headline Style Guide

J.C. Vaught, Opinion Editor. Fall 2025

---

### Core Philosophy

**We write arguments, not breaking news.**

A news headline tells the reader *what* happened. An opinion headline tells the reader *why it matters* and *who is responsible*, and often, *what should be done about it*. We do not *only* report on the existence of a problem; we pass judgment on it.

## 1 The Seven Principles

### 1.1 Principle 1: The “No Colons” Rule

Colons are for lab reports, textbooks, and news features. They create a “Label: Explanation” dynamic that is boring and passive. Opinion headlines ought to be fluid, declarative sentences that can stand on their own. It also looks weird to have 2 colons in a title; especially since all of our columns need to start with [Column: title] or [Guest Column: title].

#### Example: Dining

A writer argues that the new meal plan is too expensive and food quality has dropped.

**BAD:** Column: Dining Services: The new meal plan is a failure

**GOOD:** Column: The new dining contract exploits a captive freshman class

**ANALYSIS:** The bad column was reasonably effective, but it was missing some key elements – namely, **WHY** the plan was a failure. The revised column title answers **WHO** was affected (the freshman class) and **WHAT** happened. This helps readers determine if the article is relevant to them.

**Example: Sports**

The football team lost largely because the defense could not stop the run.

**BAD:** Column: Gamecock Football: Defense was the problem on Saturday

**GOOD:** Column: A porous defense sabotages our offensive efforts

**ANALYSIS:** The bad column tells the reader which side of the ball struggled, but it does not say how or why that struggle mattered. The revised headline turns that label into a claim: the defense did not just play poorly; it *sabotaged* the offense. That verb signals blame and implies a causal chain.

**Example: Academics**

The library is cutting its 24-hour schedule during finals week.

**BAD:** Column: Library Hours: Why they need to change back

**GOOD:** Column: Reduced library study hours has sabotaged our academic success

**ANALYSIS:** The bad headline promises that the writer will explain “why they need to change back,” but it does not tell the reader who is harmed or what exactly is at stake. The revised headline directly names both the policy and its impact.

**Example: Technology**

The campus Wi-Fi has been unreliable all semester, and IT keeps blaming students for overloading the network.

**BAD:** Column: Campus Wi-Fi: The ongoing connectivity crisis

**GOOD:** Column: Blaming students for Wi-Fi failures deflects from years of infrastructure neglect

**ANALYSIS:** The bad headline uses a colon to label the topic and then vaguely gestures at a “crisis” without assigning responsibility. The revised headline removes the label, identifies the real problem (deflection), and points the finger at the actual cause (infrastructure neglect).

## 1.2 Principle 2: The “No False Urgency” Rule

Breaking news relies on words like “Just,” “Now,” “Recently,” or “Yesterday.” Opinion writing is timeless. If your argument is strong, it does not need a timestamp to make it relevant. Focus on the *implication*, not the *timing*.

### Example: Student Government

Student Government passed a bill yesterday to fund a new aesthetic garden instead of student orgs.

**BAD:** Student Senate just passed a bill to build a garden instead of academics

**GOOD:** Funding aesthetic gardens over student scholarships is a gross misuse of fees

**ANALYSIS:** The word “just” dates the headline and makes it feel like breaking news. The revised version removes the timestamp and focuses on the lasting judgment: misuse of fees.

### Example: Tuition

The Board of Trustees announced a tuition hike this morning.

**BAD:** The Board just voted to raise tuition again — third year in a row

**GOOD:** Administrator salaries must freeze before the Board considers raising tuition

**ANALYSIS:** “Just voted” and “third year in a row” are news framing. The revised headline skips the play-by-play and jumps straight to the opinion: what should happen next.

### Example: Safety

A robbery occurred last night at an off-campus apartment complex.

**BAD:** A robbery just happened at The Hub last night

**GOOD:** Recurring crime in off-campus housing exposes a failure in city zoning oversight

**ANALYSIS:** “Just happened” and “last night” are news language. The revised headline zooms out to the systemic issue (zoning oversight) rather than the single incident.

### 1.3 Principle 3: The “No Explainers” Rule

Never promise to explain something to the reader (“Why/How X happened”). That is the job of a reporter. As a columnist, your job is to deliver the verdict immediately. Turn the “Why” into a “Result.”

#### Example: Athletics

The Head Coach fired the Offensive Coordinator after a losing streak.

**BAD:** Why the Head Coach decided to fire the Offensive Coordinator

**GOOD:** Firing the coordinator is a desperate attempt to save a failing season

**ANALYSIS:** “Why” promises an explanation. Readers clicking expect a behind-the-scenes breakdown. The revised headline delivers an immediate verdict: desperation.

#### Example: Greek Life

Fewer students are rushing sororities this year compared to last year.

**BAD:** Why sorority recruitment numbers are dropping

**GOOD:** Declining recruitment numbers signal a cultural shift away from Greek Life

**ANALYSIS:** Again, “Why” turns the headline into a question the article must answer. The revised headline answers it upfront: cultural shift.

#### Example: Transportation

The university changed the bus routes, and now they do not go to the engineering building.

**BAD:** How the new bus routes affect engineering students

**GOOD:** The new bus schedule effectively isolates engineering majors from main campus

**ANALYSIS:** “How” is explainer language. The revised headline states the effect directly: isolation. No explanation needed—the judgment is clear.

## 1.4 Principle 4: The “Opinion as Fact” Rule (No Generalizations)

New writers often try to hide their opinion by saying “Students feel...” or “Many think...” This is weak. Do not report on the students’ feelings; report on the *validity* of those feelings. State the opinion as an objective truth.

### Example: Parking

Commuters are angry because the university oversold parking permits.

**BAD:** Students are frustrated and angry about the lack of parking spots

**GOOD:** Overselling permits is a predatory practice that steals from commuters

**ANALYSIS:** The bad headline reports on emotions (“frustrated and angry”). The revised headline states a fact: overselling is predatory. No hedging.

### Example: Housing

Students are scared because they found mold in the Capstone dorms.

**BAD:** Residents are worried about mold in their rooms

**GOOD:** Unchecked mold growth in residence halls is public health negligence

**ANALYSIS:** “Worried” is a feeling. “Negligence” is a judgment. The revised headline calls out the institution instead of describing student emotions.

### Example: Mental Health

Students feel that the wait times for counseling services are too long.

**BAD:** Students think counseling services are too slow

**GOOD:** Month-long wait times for counseling render the service useless during a crisis

**ANALYSIS:** “Students think” is weak attribution. The revised headline states the consequence as objective reality: the service is useless.

## 1.5 Principle 5: The “No Names” Rule (Focus on Roles)

Unless the person is iconic (The President, The Head Coach), using a specific name in a headline often alienates readers who do not know them. Focus on the *role*, the *action*, or the *impact*. The person is temporary; the structural issue is permanent.

### Example: Student Government

Senator John Doe voted against a bill providing free scantrons.

**BAD:** John Doe voting no on scantrons was a mistake

**GOOD:** Denying academic supplies during finals week signals a disconnect from student needs

**ANALYSIS:** Most readers don’t know who John Doe is. The revised headline focuses on the action (denying supplies) and the systemic issue (disconnect from needs).

### Example: Sports

The starting quarterback keeps throwing interceptions in the fourth quarter.

**BAD:** Smith needs to stop throwing interceptions

**GOOD:** Reckless quarterback play is the single greatest liability to this season

**ANALYSIS:** “Smith” means nothing to casual readers. “Reckless quarterback play” describes the pattern, and “liability” assigns blame without requiring name recognition.

### Example: Administration

Provost Smith decided to change the grading scale to remove minuses.

**BAD:** Provost Smith made a bad call on the grading scale

**GOOD:** Arbitrary changes to the grading scale undermine academic integrity

**ANALYSIS:** The provost will eventually leave, but the policy remains. The revised headline attacks the decision, not the person—making the argument timeless.

## 1.6 Principle 6: The “Active Blame” Rule

Passive voice protects the guilty. Never say “Mistakes were made” or “Problems exist.” Identify exactly *who* is doing the action. If a system is broken, name the system.

### Example: Facilities

The elevators in a dorm have been broken for three weeks.

**BAD:** Broken elevators are a major inconvenience

**GOOD:** Housing neglect forces residents to live in inaccessible conditions

**ANALYSIS:** “Broken elevators” is passive—no one is blamed. The revised headline names the culprit: Housing, through neglect, *forces* inaccessible conditions.

### Example: Technology

The Wi-Fi in the library crashes every day at noon.

**BAD:** The Wi-Fi in the library is really bad

**GOOD:** Infrastructure failures in the library prevent students from completing basic coursework

**ANALYSIS:** “Really bad” is vague and blames no one. The revised headline names the system (infrastructure) and the consequence (preventing coursework).

### Example: Events

The ticket lottery system crashed, and nobody got tickets.

**BAD:** Mistakes were made with the student ticket lottery

**GOOD:** Athletics failed to prepare for predicted student demand

**ANALYSIS:** “Mistakes were made” is the classic passive dodge. The revised headline names Athletics as the actor and “failed” as the verb—active blame.

## 1.7 Principle 7: The “So What?” Rule (Future Consequence)

A complaint looks backward (“This is bad”). An argument looks forward (“This will cause X”). The best headlines predict the consequence of the status quo.

### Example: Academics

The university is doubling class sizes for English 101 to save money.

**BAD:** English classes are getting too big for students to learn

**GOOD:** Doubling class sizes ensures the erosion of the liberal arts education

**ANALYSIS:** The bad headline describes the present problem. The revised headline predicts the future: erosion of liberal arts. That’s the “so what.”

### Example: Diversity

The state legislature is cutting the budget for the diversity office.

**BAD:** Cutting the diversity budget is bad for the school

**GOOD:** Defunding diversity programs ensures a homogenized and unprepared student body

**ANALYSIS:** “Bad for the school” is vague. The revised headline specifies the consequence: homogenization and unpreparedness. Stakes are clear.

### Example: City Life

A beloved local coffee shop is being replaced by a Starbucks.

**BAD:** It is sad that Cool Beans is closing down

**GOOD:** Allowing corporate chains to dominate downtown erases the city’s cultural identity

**ANALYSIS:** “It is sad” is a feeling, not an argument. The revised headline identifies the future consequence: erasure of cultural identity. That’s the stakes.

## 2 Approved ‘Analysis’-Style Headline Structures

These are the “plug-and-play” formulas for writing strong headlines. When you are stuck, see which of these four templates fits your argument best.

Note that if you are writing a ‘call-to-action’ piece or a ‘activism’-esque piece, then you should skip to section 3 where we go over this in more detail. This section is more for analysis-style or reflection columns and opinions.

### 2.1 Structure 1: The “Dead/Over” Declaration

This structure declares the end of an era, a tradition, or a strategy. It is definitive and bold. It does not ask *if* something is over; it asserts that it *is*.

#### Example: Tradition

A columnist argues that mandatory attendance policies are outdated in the age of digital learning.

**BAD:** Mandatory Attendance: Why professors should stop using it

**GOOD:** The era of mandatory attendance is dead and that is progress

#### Example: Athletics

The Athletic Department keeps trying to sell season tickets by highlighting championships from the 1980s, but students don’t care.

**BAD:** Athletics needs to stop focusing on the past to sell tickets

**GOOD:** Relying on alumni nostalgia to sell student tickets is a dead strategy

#### Example: Campus Culture

Students are moving off-campus earlier and earlier, killing the traditional “dorm life” culture.

**BAD:** Dorm culture isn’t what it used to be

**GOOD:** The concept of a unified ‘campus life’ is dead to a commuter-heavy class

## 2.2 Structure 2: The Comparative Value (“X matters more than Y”)

This structure forces a choice between two values. It acknowledges that both might be good, but argues that one is *essential*. It creates conflict and stakes.

### Example: Student Fees

Student Government wants to renovate the student union lobby (aesthetic) instead of lowering the price of meal plans (affordability).

**BAD:** We need lower food prices more than a new lobby

**GOOD:** Affordable dining matters more than aesthetic renovations to meal plan holders

### Example: Elections

A candidate with a perfect resume lost to a candidate who actually talked to students.

**BAD:** Students prefer candidates who are nice over candidates with resumes

**GOOD:** Authentic connection matters more than a resume to this student body

### Example: Infrastructure

The university is prioritizing building more parking garages over making crosswalks safer for pedestrians.

**BAD:** Safety is more important than parking spots

**GOOD:** Pedestrian safety matters more than convenient parking spots

## 2.3 Structure 3: The Action/Consequence (“A acts as/leads to B”)

This is the most “scientific” of the opinion headlines. It posits that **Action A** inevitably causes **Result B**. Use strong, active verbs like *ensures*, *guarantees*, *signals*, or *acts as*.

### Example: Housing

The city refuses to put a cap on rent prices for student apartments, so poor students are dropping out.

**BAD:** High rent prices are causing students to leave school

**GOOD:** Ignoring the housing crisis acts as a silent eviction for low-income students

**Example: Tuition**

The university raised tuition but the buildings are still falling apart.

**BAD:** Tuition is going up but facilities aren't getting better

**GOOD:** Raising tuition without improving facilities is a breach of trust

**Example: Gentrification**

The university is tearing down cheap local bars to build high-end luxury condos.

**BAD:** Building luxury condos is hurting the local community

**GOOD:** Prioritizing luxury apartments ensures the gentrification of the downtown district

## 2.4 Structure 4: The Inverse/Reframe

This structure takes a common narrative (what “everyone” says) and flips it on its head. It shifts the blame from the victim to the system.

**Example: Scooters**

Everyone hates electric scooters on sidewalks, but the columnist argues they only ride there because there are no bike lanes.

**BAD:** Scooters aren't the problem, bike lanes are

**GOOD:** The demonization of electric scooters is a lazy alternative to fixing bike lanes

**Example: Attendance**

Professors complain that students aren't coming to class, but the columnist argues the classes are boring and useless.

**BAD:** It's not students' fault they don't go to class

**GOOD:** Blaming students for low attendance ignores the failure of the lecture format

**Example: Activism**

The university deleted the designated “Free Speech Zone,” claiming it was to “protect students,” but it actually silences them.

**BAD:** Removing the Free Speech Zone is bad for protests

**GOOD:** The removal of the free speech zone is the first step in sanitizing campus culture

### 3 Activism & Demands

#### Key Principle

**We do not beg; we demand.**

Weak headlines ask for change (“The university should consider X”). Strong headlines mandate change by highlighting the consequences of inaction. Avoid preachy language like “Students need to...” or “You should...”

#### 3.1 Structure 1: The “It Is Time” (The Ultimatum)

This structure is the strongest way to call for a total overhaul. It implies that patience has run out. Use it when a system is fundamentally broken and cannot be fixed with small tweaks.

##### Example: Policy

The current attendance policy penalizes students for being sick, even with a doctor’s note.

**BAD:** The attendance policy needs to be more lenient

**GOOD:** It is time to dismantle the outdated mandatory attendance policy

##### Example: Business Ties

The current dining vendor has failed health inspections three times in a row.

**BAD:** We should probably find a new dining company

**GOOD:** It is time to sever ties with the current dining vendor contract

##### Example: Bureaucracy

Student Activity Fees are being spent on parties for the executive officers, and no one knows where the rest of the money is.

**BAD:** Student Gov needs to show us where the money is going

**GOOD:** It is time to audit the mishandled allocation of student activity fees

#### 3.2 Structure 2: The Mandate (“Must,” not “Should”)

“Should” is a suggestion; “Must” or “Need” is a requirement. When targeting a specific powerful entity (The Board, City Council, The President), use “Must” to sound authoritative. Connect the action to a specific result.

**Example: Tuition**

Tuition keeps going up, and students are dropping out because they can't afford it.

**BAD:** The Board of Trustees should stop raising tuition

**GOOD:** The Board of Trustees must freeze tuition hikes to protect retention rates

**Example: City Planning**

Developers are building luxury student housing that no actual student can afford.

**BAD:** The city should make developers build cheaper apartments

**GOOD:** City Council must force developers to include affordable housing caps

**Example: Housing Monopoly**

One company owns all the off-campus apartments and is price-gouging students.

**BAD:** The administration needs to say something about the apartment prices

**GOOD:** The Administration must address the off-campus housing monopoly

### 3.3 Structure 3: The “A, Not B” (The Responsibility Shift)

This structure is excellent for reframing a debate. Often, institutions blame students for problems (safety, trash, noise). This structure pushes the blame back up the ladder to the people with power.

**Example: Safety**

The university tells students to “walk in groups” to stay safe, rather than hiring more security or fixing the streetlights.

**BAD:** Students shouldn't be the only ones worrying about safety

**GOOD:** The Administration, not the student body, must shoulder the cost of security

**Example: Labor**

The university relies on underpaid graduate students to teach classes while tenured professors do research.

**BAD:** Grad students need more help from professors

**GOOD:** Tenured faculty, not graduate assistants, must lead the charge for fair wages

**Example: Infrastructure**

Downtown roads are crumbling because of the heavy construction equipment used to build student condos.

**BAD:** We shouldn't have to pay for the roads the developers broke

**GOOD:** Developers, not residents, need to pay for the downtown infrastructure strain
