

Benchmark Results

Zero-shot metric depth (no fine-tuning on target dataset):

Dataset	AbsRel ↓	δ_1 ↑
NYUv2	0.063	0.975
KITTI	0.043	0.989
ScanNet	0.069	0.970
DIODE Out	0.308	0.832

Key: Zero-shot results that *beat* methods fine-tuned on the target dataset. CSTM enables generalization across camera types.
